Terpenoid Profile:

Component	Amount %
β-Caryophyllene	0.09
α-Humulene	ND
Caryophyllene oxide	ND
Myrcene	0.31
α-Pinene	0.61
Terpinolene	ND
Humulene epoxide II	ND
Limonene	0.83
β-Pinene	ND
E-β-Ocimene	ND
Sabinene	ND
Linalool	0.14

Method: HS-GC-FID

ND - Not Detected

Terpenoid Distribution

- β-Caryophyllene
- α-Humulene
- Caryophyllene oxide
- Myrcene
- α-Pinene
- Terpinolene
- Humulene epoxide II
- Limonene
- β-Pinene
- E-β-Ocimene
- Sabinene
- Linalool

Our microbiology analysis is standardized after the following protocols:

- ISO 6579:2003
- ISO 11290-1:2003
- ISO 16649-2:2002
- ISO 21527-2:2008

Note on Cannabinoid Testing:

All cannabinoids in their acid forms (ending in "-A") are convertible to their non-acid forms via a decarboxylation process (heating). The components lose mass through this process. To find the total theoretical active cannabinoids, one multiplies the acid forms by 87.7%. For example, CBD-A can be converted to active CBD using the formula: $CBD-A \times 0.877 = CBD$. In this case, the Max CBD for the sample is: $Max\ CBD\ (\%) = (\%CBD-A \times 0.877) + \%CBD$. The same calculation assay is valid for THC-A. This method has been validated according to the principles of the International Conference on Harmonisation.

Chromatographic Analysis:

Analysis of cannabinoids content was performed using Waters (Milford, MA, USA) UPLC separation module equipped with auto injector, sample cooler, vacuum degasser and column heater units. Separation of all cannabinoids was accomplished on YMC PRO C18 (150 x 4 mm I.D., S-2.5 μ m) RP column coupled with C18 precolumn maintained at 30 °C.

Isocratic elution consisted of acetonitrile:water (4:1) was done in 20 min. The flow rate was maintained at 0.4 ml/min. The cannabinoids were monitored using Waters (Milford, MA, USA) MS/MS detector. The injection volume of 1 mg/ml sample was 10 μ l.

Quantification of cannabinoids was obtained from linear regression equation of calibration curve of individual reference standard by plotting concentration versus the area ratio.

Analysis of terpenes was performed using GC-MS system equipped with auto injector. Separation was accomplished on Rx624Sil, 30m, 0.25 μ m ID column.
